Student Registration

Priyanka Kandukuri..

Intoduction

Student Registration Form is used to register the details of a student.Like student's Name,Age,DOB,Blodd Group,Course,Contact.

Student Registration form is a management information system for education establishment to manage student data.

Student Details

Name of the Student

Student Age

Date of Birth

Blood Group

Course

Contact

Requirements

Window

Eclipse

MYSQL yog

Jframe Tool

Student Details

We need to add the students name ,students dob,students age,Students blood group,students course,students contact number.
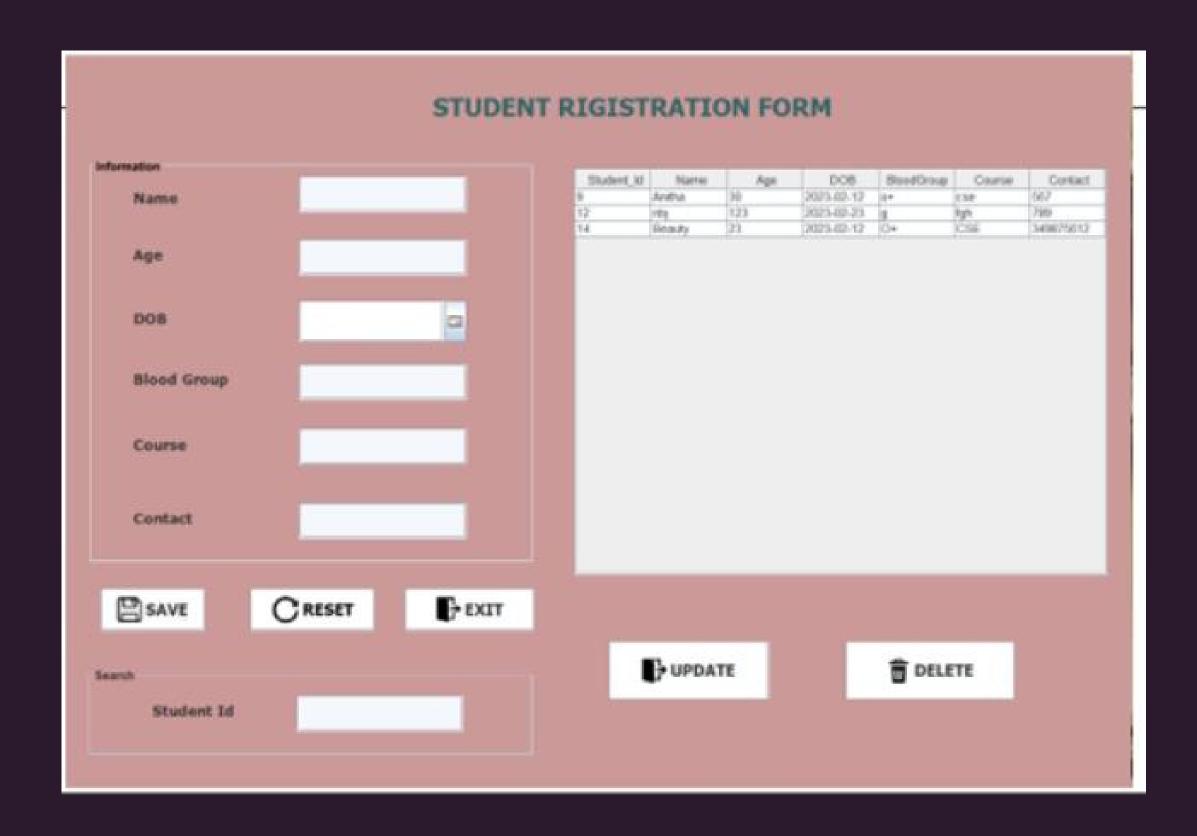

In the form all the details of student are added. Just we add the student id and we can check the total details of the student. And inthe form we can reset, update ,delete and save the datails of the student.
All the student details will be stored in the table.

A Form Design

The formation of table is done in eclipse by using tools from the palletand coding also done.And creation of Database in MYSQLyog by connecting that the details will be stored. In this we used five buttons and five lables,five text boxes and one table. In table we can see the data.

This is my project

Thank You..
